

PPE Face Shield Solutions

PPE face shields are an important piece of wearable equipment in many industries including the chemical, medical and industrial markets. PPE face shields protect the wearer from a number of hazards including fluid splash, dust/debris particles, respiratory droplets and more. Plastic materials are an excellent option for use in PPE face shields as they can be formulated to meet or exceed the necessary properties for a successful face shield within all of these markets.

**TRANSPARENT, RELIABLE PROTECTION
FROM SPLASH, PARTICLES AND
RESPIRATORY DROPLETS**
