

# Transit Shield Solutions

Bus transit is the most common form of public transportation in North America, but it comes with the risk of exposure to infectious diseases. Transit Shields are see-through barriers designed to protect operators from these potential hazards. These barriers are made from both acrylic and polycarbonate, which offer much greater impact resistance than glass. They are lightweight, shatter resistant and easy to fabricate. By offering custom-cut and routing services, ready-to-install solutions are also available upon request.

## TRANSPARENT, RELIABLE PROTECTION FROM SPLASH, PARTICLES, AND RESPIRATORY DROPLETS

### Products Available

Extruded Acrylic  
Cast Acrylic  
Polycarbonate

### Types of Transit Shields

Particle/Droplet Barrier  
Sneeze Guard

### Individual Benefits

- Lightweight
- Easily Cleaned
- Excellent Optical Clarity
- Superior Impact Resistance
- Easily Cut-to-size with Standard Tools
- Anti-scratch & Other Coatings Available
