	Elongation at Break	Color Change	Optical Transmission
Before Aging	165%	–	94.5%
6 Years S. Florida	166%	1.43ΔE	93.9%

Preserve and protect branding in challenging outdoor environments.

Protecting your graphics doesn't stop with a laminate that can ward off harsh chemicals and spray paint. Outdoor environments are especially hard on printed materials—colorful inks fade when exposed to wind, moisture, and extended exposure to UV light. GF 108 Tedlar® has superior UV durability well beyond traditional laminates. To put it to the test, Tedlar® laminated panels were placed facing south at a 45° angle to receive maximum exposure to the elements. After 6 years, the films are still at full strength with outstanding UV blocking, transparency, and no signs of cracking even under a microscope.
