

TIRED OF GETTING CANNED?

What Is Oil Canning?

Trailers made from aluminum or knock-off composite sheets often develop visible waviness in their side panels, a condition commonly known as “**oil canning**”. This is caused by temperature fluctuations that make these materials expand and contract.

Aluminum Panel

Other Composite Material

POLYCOR™ / AP

PolyCor™ AP was engineered to eliminate the “**oil canning**” issue. Developed and exclusively distributed by Piedmont Plastics®, this advanced panel delivers a smoother appearance while outperforming traditional aluminum and other composites in both durability and aesthetics.

- Completely Waterproof
- No Galvanic Corrosion
- Excellent Structural Stability
- Great Thermal Insulation

PolyCor AP
